

## Trend Micro Deep Discovery Earns Highest Score in NSS Labs Breach Detection Testing

### Comprehensive solution also cited for low cost of ownership

[Trend Micro](#) Incorporated (TYO: 4704; TSE: 4704), a global leader in security software and solutions, today announced that Trend Micro™ Deep Discovery™ 3.5 earned the top score for overall breach detection rate in [NSS Labs'](#) Breach Detection Systems (BDS) Group Test. Trend Micro also had the second lowest cost of ownership among the field. The NSS Security Value Map™ and Comparative Analysis reports evaluated threat detection appliances from six global security companies.

"Earning the highest rating in threat detection from a well-respected testing organization, such as NSS Labs, re-confirms our leadership in fast-evolving security challenges," said Eva Chen, CEO, Trend Micro. "Trend Micro Deep Discovery supports a comprehensive approach to security that enables organizations to protect data, communication and intellectual property in a cost-effective manner. As our industry continues to be overrun with marketing hype around defense against targeted attacks, this validation of Trend Micro's capabilities illustrates to security pros the advantages we deliver."

As advanced threats and targeted attacks continue to surge, the NSS Labs report provides customers with an impartial, third-party resource confirming Deep Discovery as one of the most effective threat detection solutions within a reasonable operating expense. Trend Micro's 99.1 percent score in this testing secured a "recommended" rating from NSS Labs. In addition, Deep Discovery registered zero false positives and received a 100 percent rating for detecting email-based malware and exploits.

Trend Micro's exceptional performance from a single appliance is another point of distinction that creates efficiencies in terms of costs. Deep Discovery's overall total cost of ownership was 25 percent less expensive than the test group average.

Deep Discovery's leadership in threat detection is bolstered by the hundreds of enterprise and government customers worldwide that have relied on its capabilities since its launch in 2012, including [the Republic National Distributing Company](#), the second largest distributor of premium wine and spirits in the U.S.

"In its first two months on our network, Deep Discovery has spotted and stopped 5,000 anonymous events on our WAN that were not caught by any other security layer," said John Dickson, director, IT Infrastructure, Republic National Distributing Company. "Each of those events could have potentially led to a major outbreak such as Conficker. Trend Micro has proven beyond a shadow of a doubt that its technology works as advertised."

### About Trend Micro

Trend Micro Incorporated, a global leader in security software, strives to make the world safe for exchanging digital information. Built on 25 years of experience, our solutions for consumers, businesses and governments provide layered [data security](#) to protect information on mobile devices, endpoints, gateways, servers and the cloud. Trend Micro enables the smart protection of information, with innovative security technology that is simple to deploy and manage, and fits an evolving ecosystem. All of our solutions are powered by cloud-based [global threat intelligence](#), the Trend Micro™ Smart Protection Network™ infrastructure, and are supported by over 1,200 threat experts around the globe. For more information, visit [TrendMicro.com](#).
